Professional Summary

Final-year Computer Science Engineering student specializing in Artificial Intelligence and Machine Learning. Experienced in Deep Learning, Retrieval-Augmented Generation (RAG), and LangChain-based applications. Skilled in building full-stack AI systems, scalable backend services, and integrating large language models into real-world solutions. Focused on solving practical problems through clean code, efficient system design, and end-to-end AI-driven development.

Technical Skills

Languages: Python, C, Java, SQL
Web Development & Frameworks: HTML5, CSS3, JavaScript, Bootstrap, React.js, Node.js, REST APIs
Machine Learning & Deep Learning: LangChain, Pytesseract, NumPy, TensorFlow, Keras, Pandas, OpenCV, Scikit-learn, NLP, Computer Vision, Large Language Models (LLMs), RAG
Databases: MongoDB, MySQL
Tools & Platforms: Git/GitHub, Power BI

Education

Bachelor of Engineering in Computer Science Engineering (AI & ML)	2022 – 2026
Sri Sairam Engineering College, Chennai	CGPA: 8.38/10.0
Higher Secondary Certificate	2021 – 2022
Thriveni Academy	Percentage: 82.33%
Secondary Certificate	2019 – 2020
Thriveni Academy	Percentage: 92.8%

Experience

Neubaitics Tech Pvt Ltd – Machine Learning Intern	Dec 2024 – Jan 2025
- Developed an AI-powered theft detection system leveraging computer vision and deep learning models, achieving 85% real-time threat detection accuracy under practical surveillance conditions. - Built an AI-based attendance management system with facial recognition using OpenCV and Haar cascades, improving identification reliability and reducing manual intervention. - Containerized and optimized deployment workflows using Docker, enhancing system maintainability and streamlining record management processes.	

Projects

AI Document Chatbot (RAG)	Jan 2026
Tech Stack: React.js, FastAPI, LangChain, FAISS, Gemini - Designed a full-stack RAG-based PDF chatbot enabling document-specific question answering using LangChain, FAISS, and LLMs. - Architected a scalable FastAPI backend and React.js frontend to support efficient document ingestion, semantic retrieval, and real-time AI responses, handling 100+ documents and serving 1,000+ user queries per day.	
AI Driven Learning System using Large Language Models (LLMs)	Feb 2026
Tech Stack: Python, LLMs, Streamlit, Gemini API, SQLite, Plotly - Devised a scalable AI-driven learning system leveraging Large Language Models (LLMs) to generate adaptive, personalized learning roadmaps with gamified progression (XP, streaks), improving engagement by 40%. - Created an end-to-end intelligent learning ecosystem integrating an AI-based debugging assistant, real-time code execution sandbox, and adaptive mock interview module, enhancing code efficiency and learning outcomes.	

Publications

Scalable Pothole Detection System for Urban Road Networks	IEEE 2025
- Engineered a real-time detection system using YOLOv5 on Raspberry Pi, trained on 13,000 road images, achieving 80.2% accuracy. - Implemented GPS-based geo-tagging and heatmap visualization to enable efficient road condition monitoring and maintenance planning.	

Awards and Honors

Top 15 Finalist – GUVI-HCL 24-Hour Hackathon League 2025, recognized for innovative solution design.
Best Paper Award (IEEE Conference, 2025) for excellence in research quality, innovation, and real-world impact.

Certifications

OCI Certified AI Foundations Associate | OCI Certified Foundations Associate | Full Stack Development (Udemy)
